Services provided include:

- Distributing sexually transmitted infection (STI), HIV and viral hepatitis prevention and service information to a range of audiences. In particular gay men, Aboriginal people, sex workers, people who inject drugs and people with HIV or viral hepatitis. Strategies include facilitating educational workshops, producing educational resources, implementing social media campaigns and facilitating community forums.
- Supporting and educating local services to improve services for disadvantaged or hard to access populations. In particular Aboriginal people and people who inject drugs. This includes facilitating education, consulting with service staff and/or relevant populations, assisting with service evaluation and redesign and coordinating/supporting clinical outreach.
- Providing culturally appropriate information and support for Aboriginal people.
